

SCOPE OF DISASTER SCENARIO

ROLES

ALLISON

RED CROSS (6), including 3 with HELICOPTERS / responsible for moving patients and supplies to hospitals

UN (Alberto) is responsible for communications + coordination

CIVILIANS/VICTIMS (12) All have various needs

HOSPITAL STAFF (Malin + Tisa) responsible for admitting or rejecting victims depending on whether they have required supplies and beds

FOREIGN AID (Kelly) – manages supplies of blood, water, medicine

UN briefing sheet

The UN is responsible for coordinating relationship between Red Cross and Hospitals. For example, UN is responsible for advising Red Cross to prepare for disaster by moving supplies from foreign aid to hospitals. Responsible for communicating information to all teams.

Red Cross briefing sheet

RED CROSS is responsible for assisting victims by transporting them to hospitals for medical services. Hospitals must have supplies in order to treat victims, and RED CROSS is responsible for transporting supplies (water, medicine, blood) from foreign aid station to hospitals. Lives are not saved until you successfully admit victims to hospitals. Victims can only be admitted to hospitals if they have the required supplies. After a victim is admitted to a hospital, they need to text for a new victim identity.

Civilian briefing sheet

Civilians are civilians until you receive a text indicating that you are victims. Victims may need blood, water, medicine, or some combination of the three. If you are a Spanish-speaking victim, you must only speak Spanish to communicate your needs. As a victim, you will (hopefully) receive assistance from the Red Cross. The Red Cross will transport you to a hospital for support. You cannot take yourself to the hospital; you will not be admitted. After you are successfully admitted to a hospital, you can text for additional information about your next victim identity. If you die, please sit down to indicate you can no longer participate.

Hospital briefing sheet (Malin, Spanish // Tisa, no Spanish)

The hospital is responsible for admitting or rejecting patients. You can only admit patients when you can accommodate their needs (blood, water or medicine) and language (English or Spanish). You cannot admit a patient if you do not have the required supplies. If you don't have the required supplies, you need to inform the Red Cross to get more supplies from foreign aid. You cannot admit a patient if you have run out of beds, and must turn the victim away. You can advise that they visit the other hospital. Your responsibility is to keep track of the number of lives saved (victims admitted to your hospital) by placing a happy face sticker on your index card for every victim admitted. The grid represents hospital beds; once they are full, you must turn away patients. Scenario ends when/if both hospitals close or can no longer serve victims. You must inform Allison OR the UN (Alberto). Hospital cannot accept supplies from the Red Cross if the supplies are not transported by a helicopter.

Foreign Aid briefing sheet (Kelly)

RED CROSS will collect supplies from **FOREIGN AID**. They can only transport two supplies (two waters, two bloods, two medicines, or any combination of 1+1) at a time. Only **RED CROSS** can transport supplies. All supplies must go to hospitals. **RED CROSS** cannot pick up supplies unless they are accompanied by a physical helicopter. Do not give supplies to **RED CROSS** if they do not have a helicopter.

Create a map illustrating foreign aid, hospitals, helipads, red cross station, and victim locations (school, homes)

Photocopy map + briefing sheets

Assign reading, evaluate blog post for potential problems

ID roles

BEGIN

ALLISON texts **CIVILIANS** to meet downstairs with Dylan (can set up anywhere, together or separate, in the triangle), wait for further instructions

wait

ALLISON texts **RED CROSS** to meet at HQ (statue), with map (flag?) and 3 helicopters

ALLISON texts **HOSPITALS** to establish stations in separate corners, with map and index card with dot stickers to represent saved lives and available beds. Inform Malin that her hospital can serve both English and Spanish-speaking patients.

FOREIGN AID and **UN** leave, with maps and supplies (water, medicine, blood)

ALLISON calls **UN** to inform that Hurricane will strike in 3 minutes, must inform **RED CROSS** to begin transporting supplies to hospitals.

UN doesn't know who the **RED CROSS** is, or who's in charge, but knows where their HQ is from map

UN tells **RED CROSS** in person or via text that hurricane is happening and that helicopters should prepare by transporting supplies from foreign aid to **HOSPITALS**. **RED CROSS** should refer to briefing doc to determine how to move these supplies, or can ask **UN**.

RED CROSS doesn't know where **HOSPITALS** are but refers to map to figure out. Transports supplies to both **HOSPITALS** with helicopters, two at a time.

ALLISON begins to text civilians to inform them that they have some combination of needs: Either blood, water and/or medicine. Some victims may only speak Spanish and must receive treatment at a Spanish-speaking hospital. They must wait for assistance from the Red Cross.

ALLISON tells **UN** that Hurricane has caused massive flooding and victims are spread throughout the disaster site. They may need blood, water, medicine, or all three. Some victims only speak Spanish and therefore need Spanish-

speaking **RED CROSS** and a Spanish-speaking **HOSPITAL. UN** must share this information with **RED CROSS** and assist with coordination of relief efforts. Reminder: **VICTIMS** are rescued when a Red Cross volunteer picks them up and ensures that they have been accepted at a hospital.

RED CROSS will begin rescuing victims by picking them up individually and taking them to **HOSPITALS**.

UN should monitor distribution of supplies.

ALLISON tells **UN** that **RED CROSS** is overworked and every **RED CROSS** volunteer now requires a water bottle. **RED CROSS** can retrieve water bottles from **HOSPITALS** or from **FOREIGN AID**. Every **RED CROSS** member must have a water bottle on them at all times.

UN shares this message with **RED CROSS**.

RED CROSS retrieves water bottles.

Additional obstacles:

Hurricane has caused electricity + cell coverage to go out. No electronic communication is possible – all communication must happen in person.

Require that some victims must find each other (ie, mother + daughter, ex Yazmin + Tisa) before being admitted to hospital
