

Blown to Bits Test 3

Bottom of page 120 “It Matters How it Works” to page 137

Student’s Name:

What are the three “background” steps in creating a search engine (the steps before a user enters a search query)?

As described in the chapter, name two reasons for why a “spider” may not crawl a particular web page.

Describe why a binary search is faster than searching based on alphabetical order.

What factors are used in determining the PageRank of a web page?
